## SPEAKER-1115-SC-NAUTILUS 180

The $11 \times 15 \times 4.0$ Nautilus speaker features the state-of-the-art side-firing technology. It provides a lateral sound outlet, which is already integrated in the cover of the speaker.

The usage of the Nautilus speaker significantly saves height in mobile phone architectures. Conventional side-ported designs always need additional air channels, which increase the thickness of the total speaker application.

The Nautilus speaker provides the proven acoustic performance of the industry standard $11 \times 15 \times 3.5$ speaker.

Features:

- Lateral sound outlet at total height of only 4 mm
- Low resonance frequency $(750 \mathrm{~Hz})$
- 500 mw power handling capacity
- Very robust spring connectors
- $100 \%$ in-line measurement of all specified electrical and acoustical parameters

## 240326000089

## 1. Theory of operation

SPEAKER-1115-SC-NAUTILUS 180 delivers maximum space efficiency and audio performance in small, slim consumer devices with lateral sound outlet, such as mobile handsets or smartphones.

## 240326000089

## 2. Mechanical Layout and Dimensions

### 2.1. Main Dimensions

The gasket zone just defines the possible area for a gasket. For a detailed gasket recommendation refer to APNOxx.

## 240326000089

### 2.2. PWB Layout

### 2.3. Spring Force

## 240326000089

### 2.4. Force layout

| STATICAL FORCES ON DIFFERENT STATES OF COMPONENT |  |  |  |

| 2. VOICE COIL RESISTANCE | $\mathrm{R}:$ | $7.4 \Omega \pm 10 \%$ |
| 3. RESONANCE FREQUENCY <br> at 420mW | $\mathrm{f}_{0}:$ | $750 \mathrm{~Hz} \pm 10 \%$ |
| 4. MAXIMUM LINEAR EXCURSION | Xmax: | $+/-0.30 \mathrm{~mm}$ |
| 5. CHARACT. SENSITIVITY (1W in 1 m$)$ <br> average from 2 kHz to 3 kHz | $73 \pm 2 \mathrm{~dB}$ |  |

6. THD
7. RUB \& BUZZ
according to chapter 5.1
no audible rub \& buzz at 420 mW

### 4.2. Power handling

Loudspeaker mounted in lifetime test device (closed Box 1 ccm , open front)
Signal: pink noise with high-pass $12 \mathrm{~dB} / \mathrm{Oct}$. at 800 Hz , crest factor 2 , used for all operating lifetime tests

1. MAX.SHORT TERM POWER 1 sec ON, 1 min . OFF, 60 cycles 1000 mW
Ambient temperature $70^{\circ} \mathrm{C}$
2. MAX LONG TERM POWER 1 min ON, 2 min . OFF, 10 cycles 600 mW
Ambient temperature $70^{\circ} \mathrm{C}$
3. MAX. NOISE POWER (PHC continuous) 500 h 500 mW

Ambient temperature $70^{\circ} \mathrm{C}$

## 340326000089

### 4.3. Measurement setup

### 4.4. Measured Parameters

### 4.4.1. Sensitivity

SPL is expressed in dB rel $20 \mu \mathrm{~Pa}$, computed according to IEC 268-5.
Measurement set up and parameters according chapter 5.3
This test is performed for $100 \%$ of products in the production line.

### 4.4.2. Frequency response

Frequency response is measured according test set up in chapter 5.3, data sheet and checked against the tolerance window defined in chapter 5.1. This Test is performed for $100 \%$ of products in the production line.

### 4.4.3. Total harmonic distortion (THD)

Is measured according IEC 268-5 (2nd to 5th harmonics) and test set up in chapter 5.3. This test is performed for $100 \%$ of products in the production line.

### 4.4.4. Rub\& Buzz

Rub \& Buzz will be measured in the Inline-measuring device with a sinusoidal sweep. Rub \& Buzz is defined as the maximum level of no harmonic energy, expressed as signal to non-harmonic content ratio, in a certain frequency-range. Signal and evaluation criteria are according to chapter 5 . This test is performed for $100 \%$ of products in the production line.

## 240326000089

4.5. Measurement adapter $1 \mathrm{~cm}^{3}$

## 240326000089

## 5. Environmental Conditions

### 5.1. Storage

The transducer fulfils the specified data after treatment according to the conditions of

| ETS 300 019-2-1 | Specification of environmental test: Storage |
| :--- | :--- |
|  | Test spec. T 1.2: Weather protected, not temperature controlled storage |
| locations. |  |

### 5.2. Transportation

The transducer fulfils the specified data after treatment according to the conditions of

ETS 300 019-2-2 Specification of environmental test: Transportation Test Spec. T 2.3: Public Transportation

### 5.3. Functionality

The transducer fulfils the specified data after treatment according to the conditions of
ETS 300 019-2-5 Specification of environmental test: Ground vehicle installations Test spec. T 5.1: Protected installation
ETS 300 019-2-7 Specification of environmental test: Portable and non-stationary use Test spec. T 7.3E: Partly weather protected and non-weather protected locations.

## 240326000089

## 6. Environmental tests

### 6.1. Qualification tests

According to our milestone plan (Product Creation Process), a complete qualification test will be done at design validation of products manufactured under serial conditions.
$1 x$ per year and product family a requalification takes place. The qualification process covers all tests described under 7.5 and a complete inspection.

### 6.2. Reliability tests

1x per month and product family samples are taken and submitted to tests described under 7.5.2

### 6.3. Sample Size, Sequence

Unless otherwise stated 20 arbitrary new samples will be used to perform each test for both, qualification and requalification test as described under 7.1 and 7.2.

### 6.4. Period of Shelf-Life

The period of shelf-life is 2 years.

### 6.5. Testing Procedures

### 6.5.1. Storage Tests

### 6.5.1.1. Low Temperature Storage Test

| Parameter | Test Method and <br> Conditions | Duration | Evaluation Standard |
| :---: | :---: | :---: | :---: |
| Low Temperature | $-40^{\circ} \mathrm{C}$ <br> Storage <br> (Ref. EN 60068-2-1) | 168 h <br> controlled | Measurements after 2 hours <br> recovery time. |
| All samples fully operable. |  |  |  |
| All acoustical parameters |  |  |  |
| according specification with |  |  |  |
| tolerances increased by $50 \%$. |  |  |  |

### 6.5.1.2. High Temperature Storage Test

| Parameter | Test Method and <br> Conditions | Duration | Evaluation Standard |
| :---: | :---: | :---: | :---: |
| Dry Heat Storage | $+85^{\circ} \mathrm{C}$ <br> (Ref. EN 60068-2-2) | 168 h <br> controlled | Measurements after 2 hours <br> recovery time. |
| All samples fully operable. |  |  |  |
| All acoustical parameters |  |  |  |
| according specification with |  |  |  |
| tolerances increased by $50 \%$. |  |  |  |

## 240326000089

### 6.5.1.3. Temperature Cycle Test

| Parameter | Test Method and <br> Conditions | Duration | Evaluation Standard |
| :---: | :---: | :---: | :---: |
| Change of Temperature | $-40^{\circ} \mathrm{C} /+85^{\circ} \mathrm{C}$ <br> (Ref. EN 60068-2-14) | Transition time $<3$ min. <br> See Figure $7-1$ below <br> $>2 \mathrm{~h}$ for each <br> temperature | Measurements after 2 hours <br> recovery time. <br> All samples fully operable. <br> All acoustical parameters <br> according specification with <br> tolerances increased by $50 \%$. |

Figure 7-1: Temperature Cycle Test

### 6.5.1.4. Temperature / Humidity Cycle Test

| Parameter | Test Method and Conditions | Duration | Evaluation Standard |
| :---: | :---: | :---: | :---: |
| Damp heat, cyclic (Ref. IEC 60068-2-30) | $+25^{\circ} \mathrm{C} /+55^{\circ} \mathrm{C}$ <br> $90 \%$ to $95 \% \mathrm{RH}$. <br> Temp. change time $<3 \mathrm{~h}$ <br> See Figure $7-2$ below <br> Caution: no condensed <br> water on products! | 6 cycles. <br> 12h at each temperature | Measurements after 2 hours recovery time. <br> All samples fully operable. <br> All acoustical parameters according specification with tolerances increased by 50 \%. |

Figure 7-2: Temperature / Relative Humidity Cycle Test

## 240326000089

### 6.5.2. Operating Tests

### 6.5.2.1. Cold Operation Test

| Parameter | Test Method and <br> Conditions | Duration | Evaluation Standard |
| :---: | :---: | :---: | :---: |
| Cold Operation Test <br> (Ref. EN 60068-2-1) | $-20^{\circ} \mathrm{C}$ <br> rel. humidity not <br> controlled <br> signal acc. Chapter 5.2. | 72 h | Measurements after 2 hours <br> recovery time. |
|  |  | All samples fully operable. <br> THD may be increased after <br> test. All other acoustical <br> parameters according |  |
| specification with tolerances |  |  |  |
| increased by $50 \%$. |  |  |  |

### 6.5.2.2. Dry Heat Operation Test

| Parameter | Test Method and <br> Conditions | Duration | Evaluation Standard |
| :---: | :---: | :---: | :---: |
| Dry Heat Operation <br> (Ref. EN 60068-2-2) | $+70^{\circ} \mathrm{C}$ <br> rel. humidity not <br> controlled <br> signal acc. Chapter 5.2 | 500 h | Measurements after 2 hours <br> recovery time. |
|  |  | All samples fully operable. <br> The allowable change in <br> sensitivity shall not be greater <br> than 3 dB. All other acoustical <br> parameters according |  |
| specification with tolerances |  |  |  |
| increased by $50 \%$. |  |  |  |

### 6.5.3. Salt Mist Test

| Parameter | Test Method and <br> Conditions | Duration | Evaluation Standard |
| :---: | :---: | :---: | :---: |
| Sef. IEC601t Mist <br> $\mathrm{Kb} /$ Severity 2 | The part must be <br> subjected to 2 hours <br> spray of $5 \% \mathrm{NaCl}$ salt <br> mist, at $35^{\circ} \mathrm{C}$ then be <br> left at $40^{\circ} \mathrm{C}$ and $95 \%$ <br> RH for 22 h. | 3 cycles | The samples shall be washed <br> after the test with distilled water <br> and dried at $\mathrm{T}<50^{\circ} \mathrm{C}$. |
|  | Component may have reduced <br> performance, but must still |  |  |
| function properly. The allowable |  |  |  |
| sensitivity difference shall not |  |  |  |
| be greater than $\pm 3 \mathrm{~dB}$ from |  |  |  |
| initial sensitivity. |  |  |  |

## 240326000089

### 6.5.4. $\quad$ Shock Resistance Test (Free Fall Test) - protected product

| Parameter | Test Method and <br> Conditions | Conditions / <br> Sample size | Evaluation Standard |
| :---: | :---: | :---: | :---: |
| Mechanical shock | Speaker in drop test <br> (Ref. IEC60068-2-32 <br> Ed), Procedure 1 representative <br> mechanics from a <br> height of 1.5m onto <br> concrete floor. | 30 units <br> Two drops on <br> each side (2x6) <br> One drop on <br> each edge <br> $(1 \times 12)$ Two <br> (rops on each <br> corner (2x8) <br> $(40$ drops in <br> total) | Component may have reduced <br> performance, but must still <br> function properly. The allowable <br> sensitivity difference shall not <br> be greater than $\pm 3 \mathrm{~dB}$ from <br> initial sensitivity. |
|  |  |  |  |

### 6.5.5. Impact Durability Test (Tumble Test) - protected product

| Parameter | Test Method and <br> Conditions | Conditions / <br> Sample size | Evaluation Standard |
| :---: | :---: | :---: | :---: |
| Impact durability (in a <br> Tumble Tester) <br> (Ref. IEC60068-2-32 <br> Ed) | Speaker in drop test box <br> or representative <br> mechanics. Random <br> drops on steel base. | 30 units <br> (SPR a7.1.1) | DUT power off | | Component may have reduced |
| :---: |
| performance, but must still |
| function properly. The |
| allowable sensitivity difference |
| shall not be greater than $\pm 3 \mathrm{~dB}$ |
| from initial sensitivity. |

### 6.5.6. Resistance to Electrostatic Discharge

| Parameter | Test Method and Conditions | Conditions / <br> Sample size | Evaluation Standard |
| :---: | :---: | :---: | :---: |
| Resistance to ESD IEC61000-4-2 Level 4 (SPR c 2.5.1) | One pole is grounded and the ESD pulse is applied to the other pole. The speaker must be stressed first with one polarisation and then with the other polarisation. DUT must be discharged between each ESD exposure. <br> Level 4: contact $+/-8 \mathrm{kV}$, air +/-15kV | 10 exposures on each polarity / 5 units <br> DUT Power off | All samples fully operable. <br> All acoustical parameters according specification with tolerances increased by 50\%. |
